MODEL TL4: THE LOCKER

Save time and effort with The Locker. It hydraulically secures both sides of a container's trunnion bar from the convenience of one side. Available with safety locks that prevent operation of the winch/kick bar unless the locker is closed.

Features and Benefits

Servicing large rear-load containers is no longer a pain with The Locker. It eliminates the need to walk around the container to close the opposite side. When equipped with the safety lock valves, the operator is forced to secure the container with The Locker, or the kick bar and winch will not work. The Locker makes picking up a rear load container faster and safer.

- ◆ Hydraulically lock both sides of a rearload container, eliminating walking around
- ◆ Available Safety Lock Valves prevent winch and kick bar operation unless the Locker is closed securely.
- ◆ Powerful closing action can help pull containers into alignment, no more adjusting the position of the container with the truck.
- ◆ Minimal greasing for less maintenance
- ◆ ISO 9001 manufacturer
- ◆ National Service technicians for product support
- ◆ Fully staffed engineering department for custom applications

Specifications

- Fully compatible to ANSI Type T commercial containers
- Compatible with all Perkins lifters and competitive lifters
- Rack & Pinion operation
- Optional safety valves will prevent operation of the winch and/or kick bar unless the Locker is closed
- 1" thick steel plate construction
- May be custom installed to nearly any rearloader, regardless of model or size.
- Compact design is compatible with trucks having a kick bar or tipper bar
- Simple one-touch operation
- Provided in primer only
- 1 year limited warranty
