MODEL TL4: THE LOCKER

Save time and effort with the Locker. With the touch of a handle, The Locker aligns and locks-in commercial containers for quicker and safer pick-ups. The Locker's safety valves prevent the winch or kick-bar from operating until the locker is closed, and the container secured, increasing operator safety. The patented Locker is offered exclusively by Perkins.

Features and Benefits

The Locker makes picking up a rear load container faster and safer. One-pull controls eliminates the need to walk around the container to close the opposite side. The safety lock valves hydraulically prevent the operation of the winch and/or kick bar unless The Locker is closed, ensuring a safe lift.

- ◆ Hydraulically lock both sides of a rearload container, saving time and effort
- ◆ Hydraulic safety lock valves prevent winch and kick bar operation unless the Locker is closed securely.
- ◆ Powerful closing action can help pull containers into alignment, no more adjusting the position of the container with the truck.
- ◆ Minimal greasing for less maintenance
- ◆ ISO 9001 manufacturer
- ◆ National Service technicians for product support
- ◆ Fully staffed engineering department for custom applications

Specifications

- Fully compatible to ANSI Type T commercial containers
- Compatible with all Perkins lifters and competitive lifters; works with or without a cart lifter
- Rack & Pinion operation
- Hydraulic locking valves will prevent operation of the winch and/or kick bar unless the Locker is closed
- 1" thick steel plate construction
- May be custom installed to nearly any rearloader, regardless of model or size.
- Compact design is compatible with trucks having a kick bar or tipper bar
- Simple one-touch operation
- 90 Day limited warranty
